01.0 - IDENTIFICATION DETAILS

CONCRETE BOOM  
TYPE: AZ-37.4/125  
SERIAL N°: 4775

01.0.1 - BOOM IDENTIFICATION PLATE

The boom identification plate of fig. 1 is located on the turret structure as from pos. 6 of Pag. 8.

		<b>ANTONELLI</b> s.r.l. Via Malpasso,1441/1447 47842 - S. Giovanni in Marignano (RN) Italy Tel. 0541/955258 (4 linee) Fax 0541/957103

MANUFACTURER'S NAME

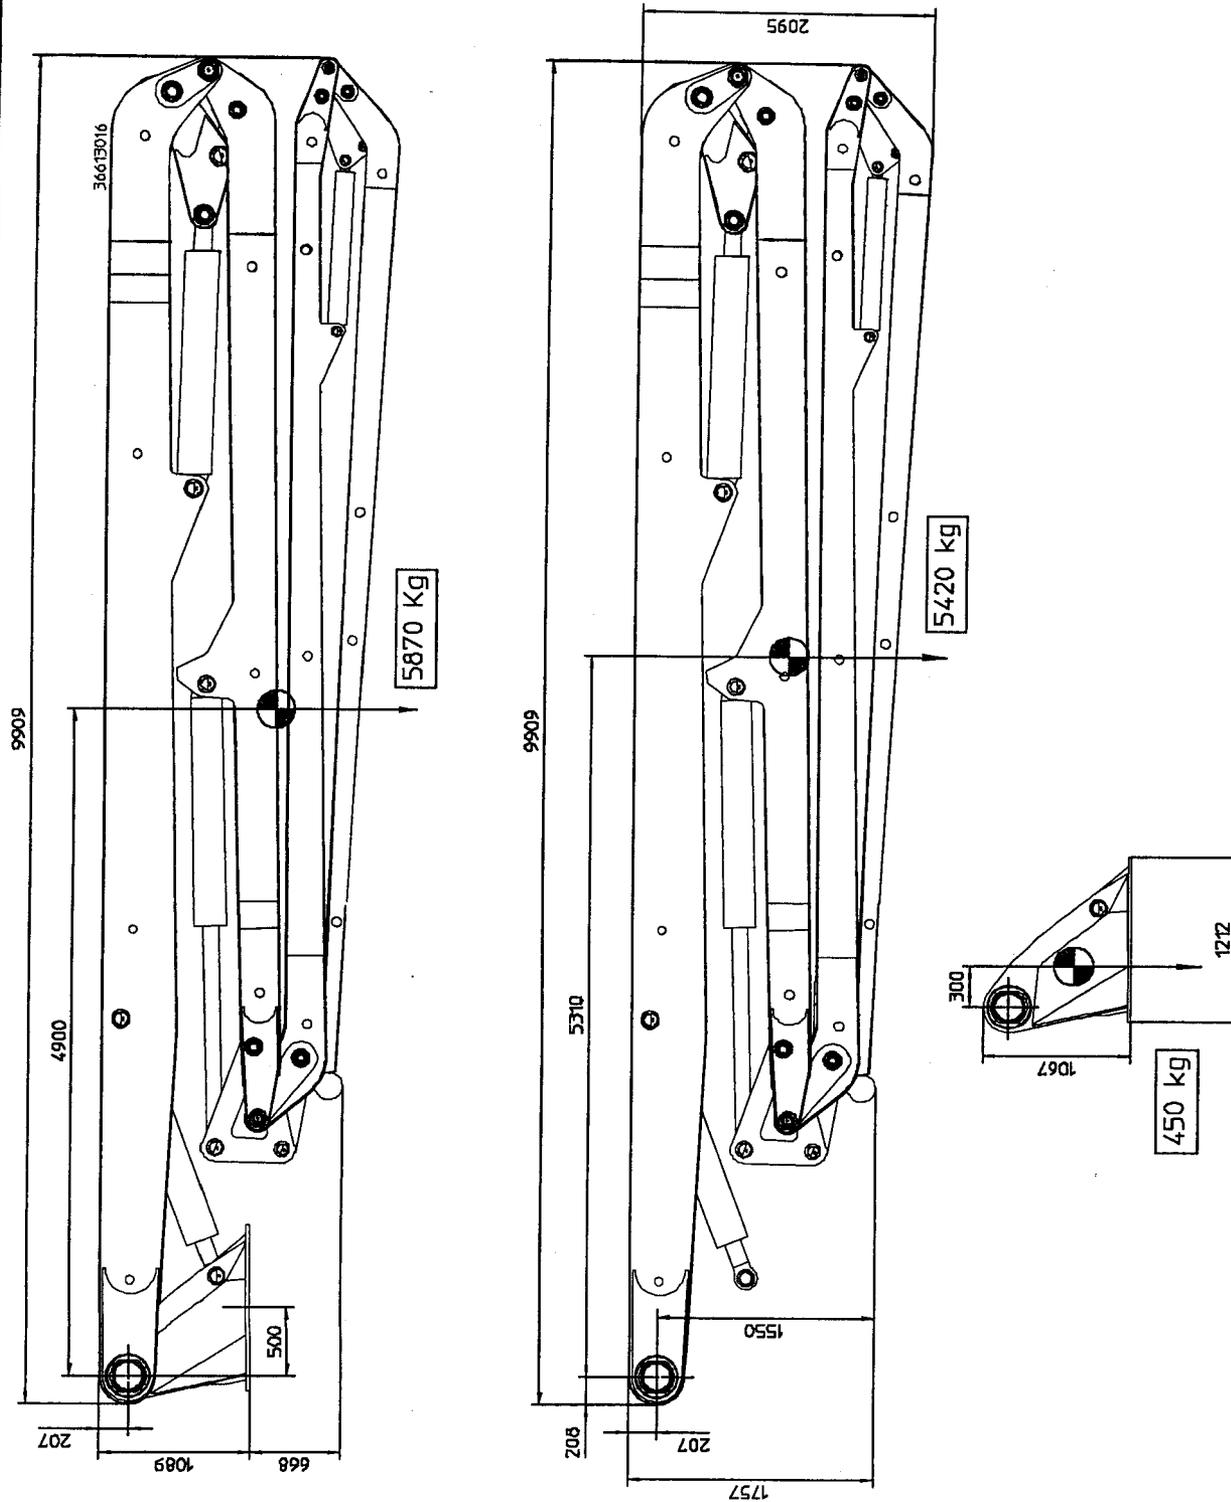

BOOM SERIAL NUMBER

DESCRIPTION  
AZ-37.4/125

02

01.1 - OVERALL VIEW OF THE MACHINE, DIMENSIONS AND WEIGHTS

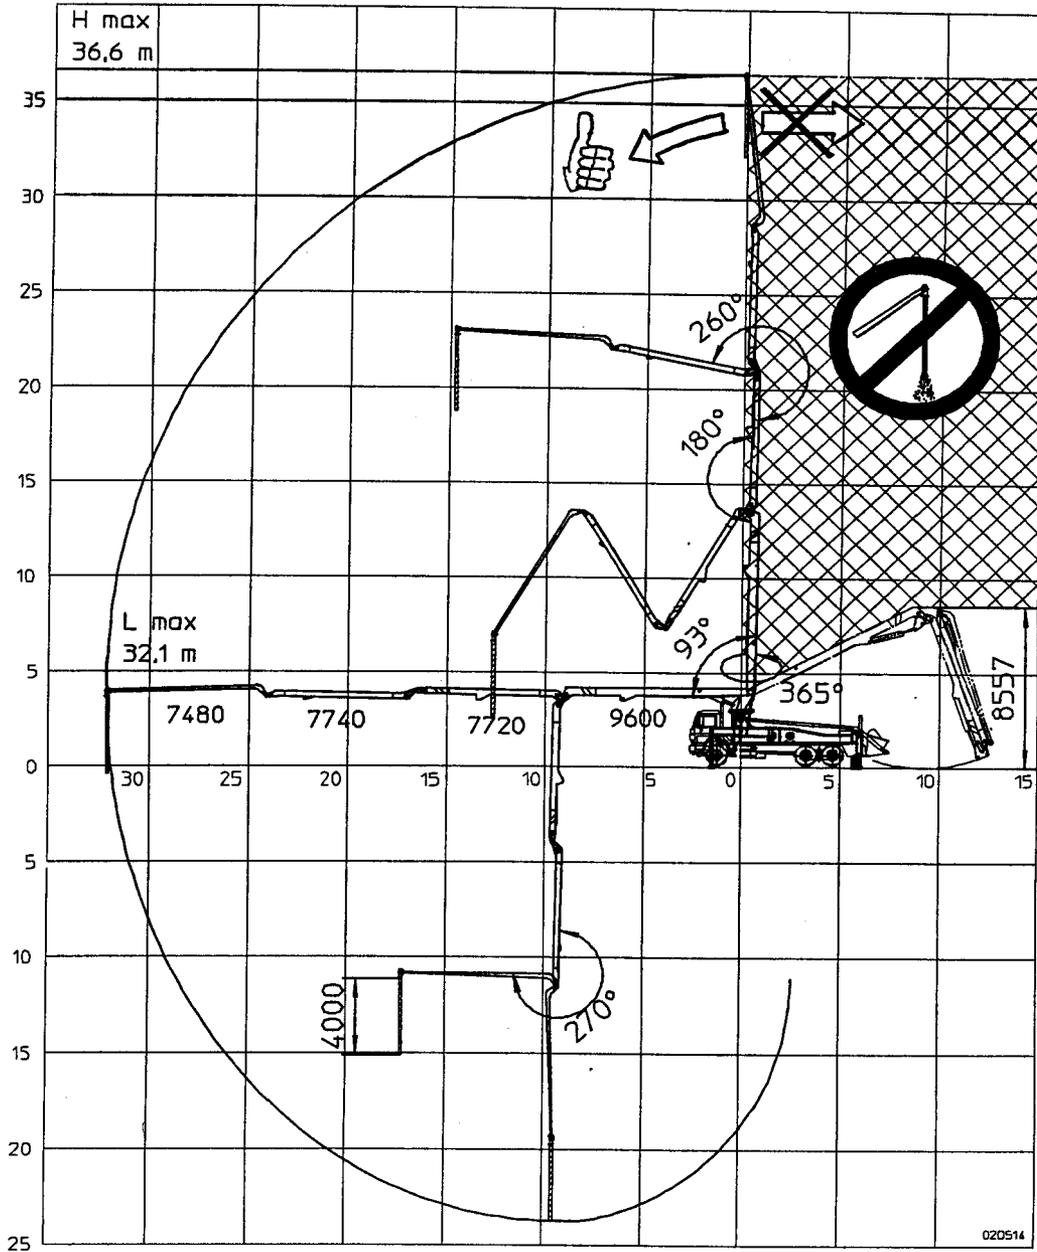

**01.2 - BOOM OPENING AREA**

The figure below shows the boom opening area.

The need for large opening angles (so as to be able to work close to the turret) does not mean it is possible to work with the terminal pipe in all reachable positions.

**WARNING!**

It is forbidden to work with the end section of the pipe further back than the head rotation vertical axis.

## 02.1 - SAFETY INSPECTION

THE CONCRETE DISTRIBUTOR BOOMS, INCLUDING PIPING, MUST BE CHECKED AFTER 500 HOURS AND AT ONCE A YEAR BY AN EXPERT TO ENSURE THEY ARE WORKING CORRECTLY

## 02.2 - IMPROPER USE

### IT IS FORBIDDEN:

- To use the machine for work different from that for which it was designed and built.
- To modify or remove any safety and accident-prevention devices such as warning plates, guards, seals, lead seals, etc.
- To extend the boom or end section.
- To alter the set pressure in any part of the system.
- To perform jerky movements, or sharply reverse the direction of the boom, especially in a continuous manner as this could cause dangerous swinging.
- To install a concrete pipe of greater diameter or of heavier weight.
- To use the boom as an elevator.
- To make structural changes to boom sections (Sections, head, turret, stabilizers).
- To modify software management programmes.
- To make changes to the hydraulic cylinders or rotation system.
- To make changes to the distributor and various controls.
- Not to carry out recommended maintenance, especially safety inspections.
- To work in the presence of electric storms.
- To work near power lines (see point 03.1.7)
- To operate the stabilizers when persons are standing in their range of action and with the boom not completely closed.
- To use the boom when persons are standing in the danger area.
- To start pumping when persons are standing near the end pipe, i.e., within a radius delimited by its length.
- To pump the concrete with the end pipe bent or emerged in the concrete.
- To use or leave the boom open when wind is blowing at over 60 km/h.
- To open the boom when the vehicle is not correctly stabilized.
- To use the boom outside the recommended temperature range (-20÷40°C).
- To leave the ignition key in the control panel after work and the diesel engine running.
- To work with the end pipe further back than the vertical axis passing through the head (boom turned backwards).

**WARNING!**

Failure to comply with the above will invalidate the warranty with declination of all responsibility on the part of Antonelli.

**WARNING!**

Improper use could damage the machine and create dangerous situations for persons.

## 02.3 - PRESCRIPTIONS FOR MAKING THE CONCRETE DELIVERY LINE

- MAX INNER DIAMETER OF THE PIPE 125 mm
- MAX WEIGHT OF THE PIPE 12,8 Kg/m
- MAX INNER DIAMETER OF THE HOSE 125 mm
- MAX LENGHT OF THE HOSE 4m

### 03.6 - TABLE OF PRESSURES AND MANOEUVRE TIMES

When the boom is fitted on the vehicle, a final test will have to be performed to check pressures and manoeuvre times of each boom section. The above test must be performed using hot oil (oil temp.: 50°C) and with the hydraulic pump operating at full speed. The maximum pressures shown must correspond to the values indicated in the following tables with a tolerance equal to  $\pm 2\%$ . The manoeuvre times shown must correspond to the values indicated in the following tables with a tolerance equal to  $\pm 15\%$ ; in the event of the values being below 15%, it is necessary to check if the flow capacity of the hydraulic pump of the distributor sections and the throttles inside the check valves correspond with the values shown on the table. Action will have to be taken if the maximum pressure and manoeuvre times at top speed are outside tolerance limits.

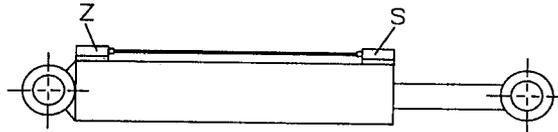

#### WARNING!

The boom should never be operated at pressures or at speeds higher than those set out in the beginning by Antonelli s.r.l and quoted below.

#### SYSTEM FEATURES AND SWIVEL SETTING PRESSURES

TAB.1:

DESCRIPTION	PRESSURE (BAR)
Swivel	120
Hydraulic distributor max. inlet pressure	330
Hydraulic distributor max. outlet pressure	10
Pressure max pump Load Sensing	60/1'
Max. hydrostatic pump flow rate	

#### SETTING PRESSURES OF BOOM VALVES AND DISTRIBUTOR SECTIONS

TAB. 2:

BOOM HYDR. CYLINDER POS.	ARTIC. A		ARTIC. B		ARTIC. C		ARTIC. D		ARTIC. E	
CHECK VALVE POSITION	Z	S	Z	S	Z	S	Z	S	Z	S
Check valve throat d. (mm)	2	/	/	/	/	/	/	/	/	/
Check valve pressures (bar)	340*	310*	280*	340*	310*	340*	310*	340*		
Pressures of distributor sect. (bar)	330	310	280	330	300	300	290	330	/	/

\* valves adjusted on bench when they start to open and without counterpressure at the discharge

#### MANOEUVRE TIMES

TAB.4 - BOOM:

BOOM SECTIONS	Section Artic. A		Section Artic. B		Section Artic. C		Section Artic. D		Section Artic. E		Right Swivel 1 Rev.	Left Swivel 1 Rev.
	Open.	Clos.										
TIME (sec.)	90	90	110	110	110	110	60	60	/	/	160	160

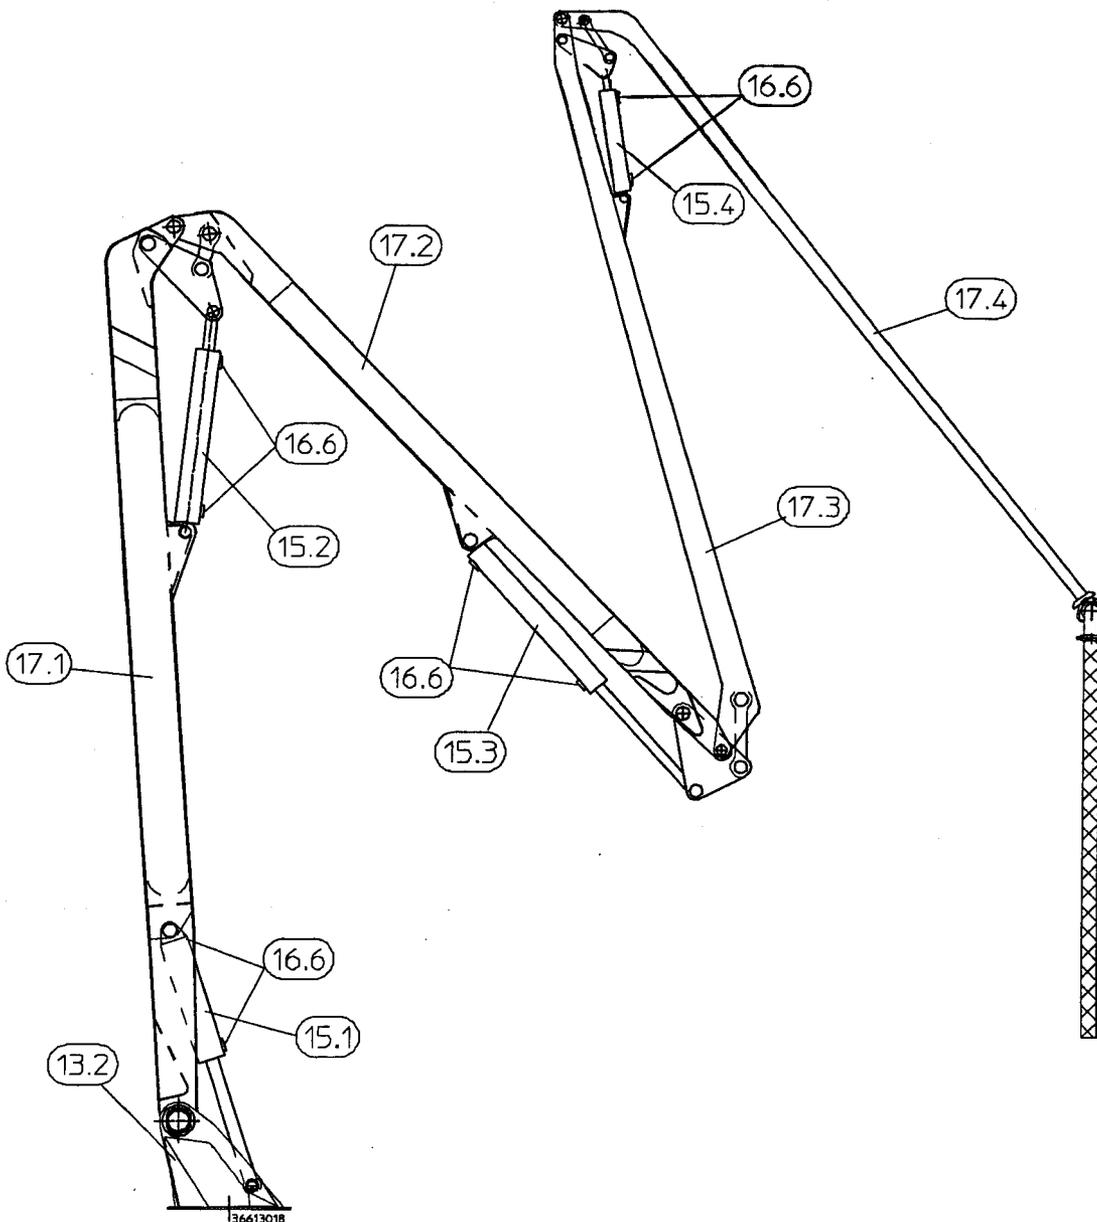

### 04.1 - TROUBLESHOOTING OF THE ARM PACKET

Despite the boom being carefully tested for hours, by simulating operating conditions, a number of faults can occur, mainly due to the presence of impurities in the hydraulic circuit or power contact problems.

<b>PROBLEM</b>	<b>CAUSE</b>	<b>REMEDY</b>
A single boom function fails to respond to the manual distributor	- Clogged restrictor. This restrictor is fitted in the valve applied to the cylinder on the oil drain-off side	Clean the restrictor with the boom closed.
A section of the arm drops despite not being activated.	- Non-return valve dirty	- Clean the valve at hydr. cylinder. Such operation must be done by an engineer. Set the valve after cleaning. The pressure to be set is printed on the valve body. - If this does not solve the problem, replace the valve.
The boom moves in jerks and/or irregularly.	- Air in the hydraulic circuit. - Insufficient fluid in circuit	- Check level of oil in sump. Increase the rpm of the hydraulic pump.
Noises in kinematic mechanisms	- Lack of or poor lubrication - Friction in concrete curve articulated joints	- Lubricate as indicated at chapter 07.1 of manual. - Dismantle coupling and, lubricate and replace gasket.

10.1 - GLOSSARY OF COMPONENTS

- 13.2 - REVOLVING HEAD
- 15.1 - HYDR. CYLINDER (1ST BOOM OP.)
- 15.2 - HYDR. CYLINDER (2ND BOOM OP.)
- 15.3 - HYDR. CYLINDER (3RD BOOM OP.)
- 15.4 - HYDR. CYLINDER (4TH BOOM OP.)
- 16.6 - CHECK VALVE OF HYDRAULIC CYL.
- 17.1 - 1st BOOM SECTION
- 17.2 - 2nd BOOM SECTION
- 17.3 - 3rd BOOM SECTION
- 17.4 - 4th BOOM SECTION

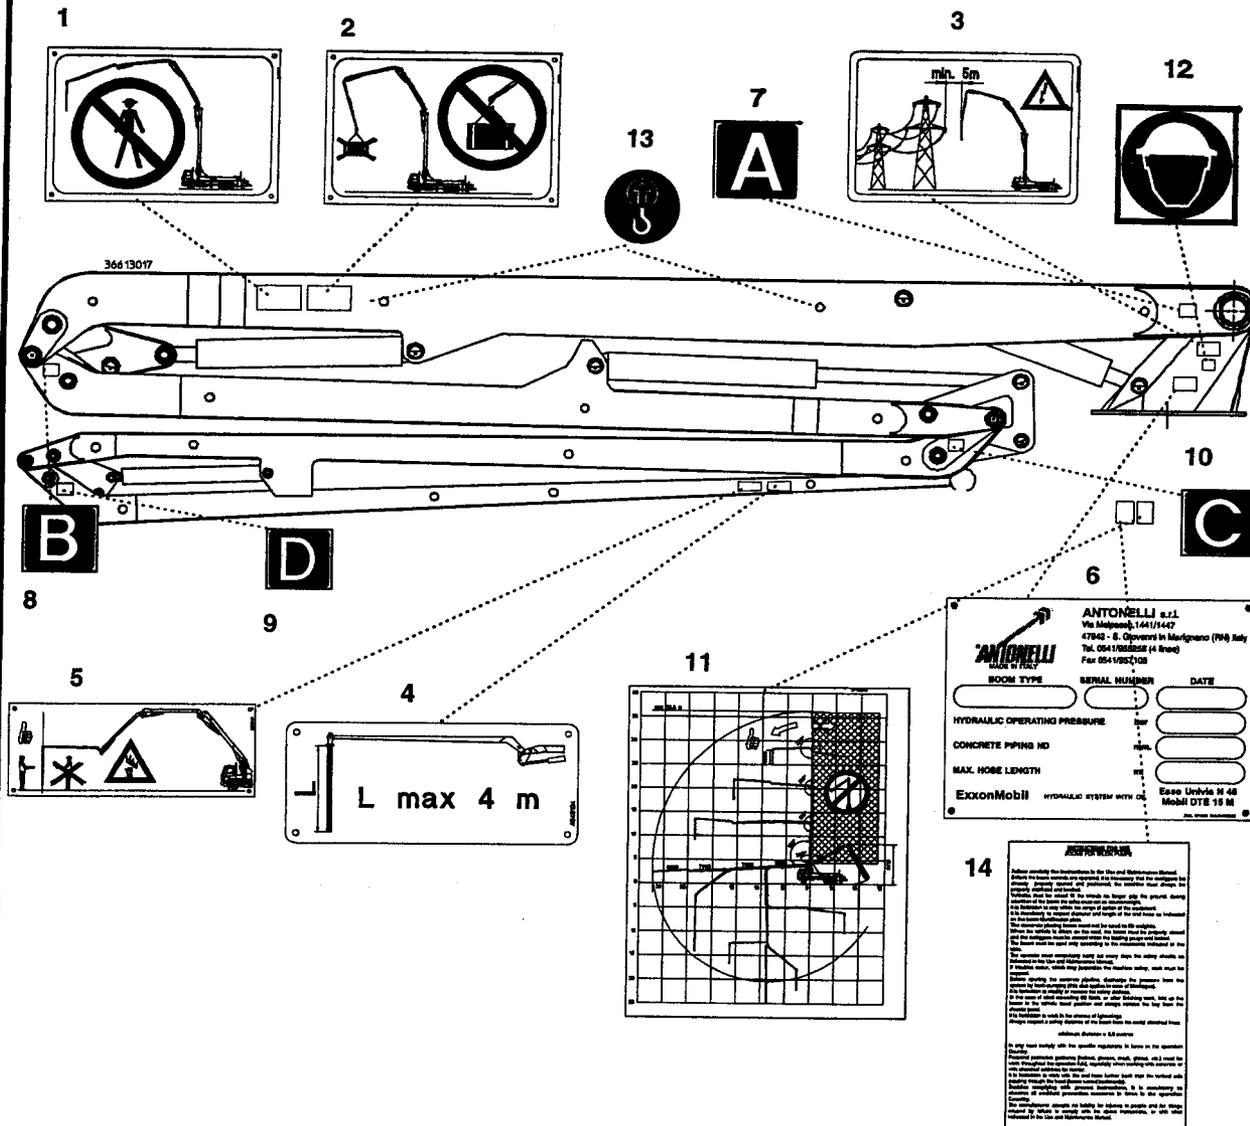

DESCRIPTION  
AZ-37.4/125

11

### 11.1 - POSITION OF IDENTIFICATION DETAILS AND SIGNPLATES

The identification plates 6 and 11 are supplied dismantled.  
The manufacturer's name and boom serial number are stamped on the edge of the base bearing support.  
The remaining signplates are located on both sides of the machine (excluding positions 6 and 11).

**WARNING!** 

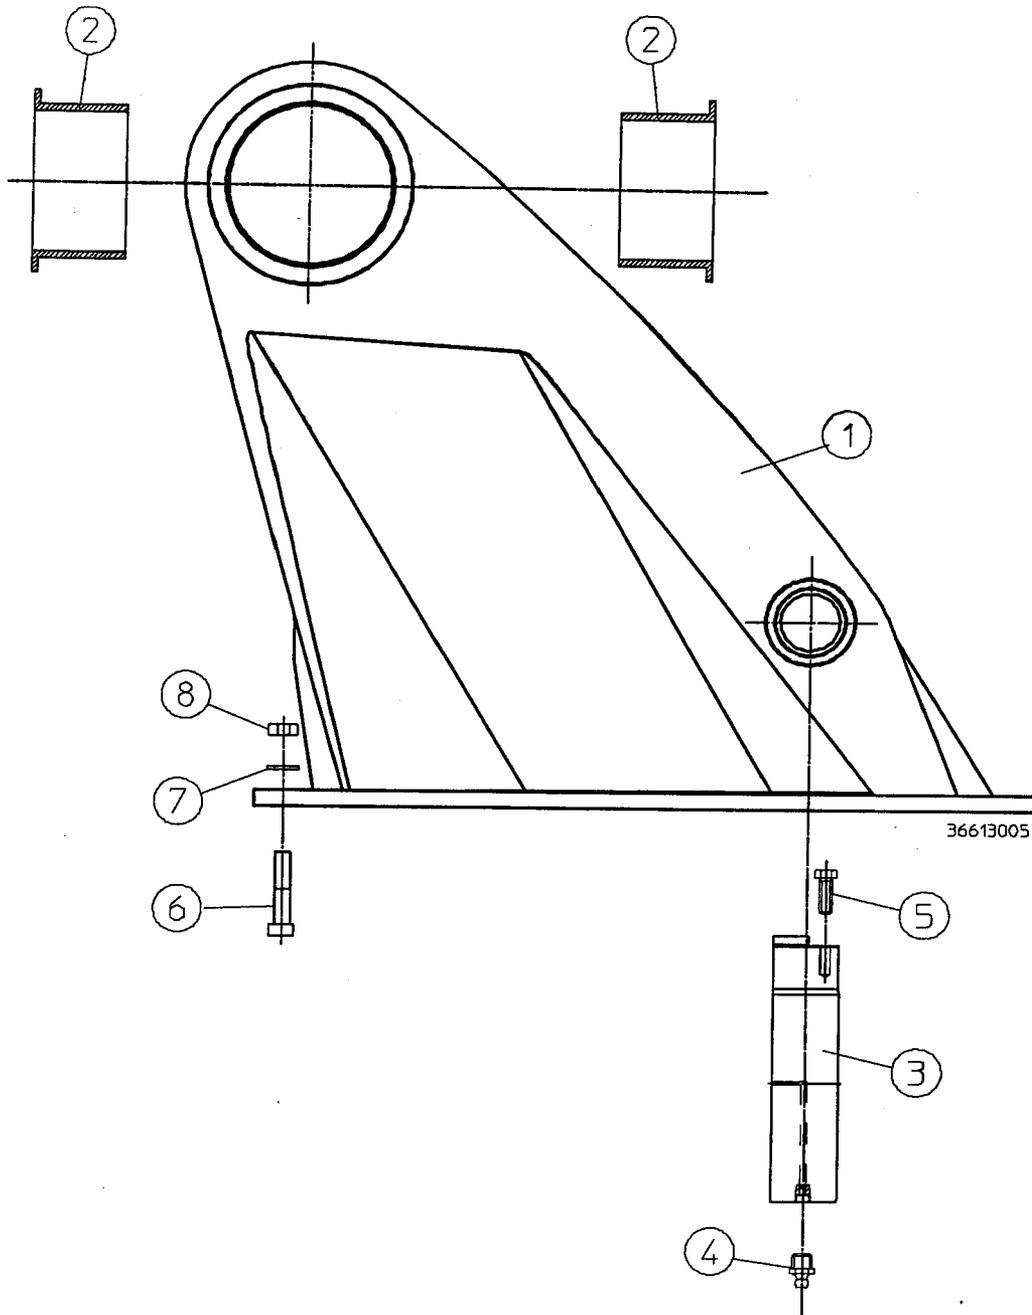

Every 6 months check the condition (wear and readability) of all the instruction plates fitted to the machine.

SWIVEL HEAD  
AZ-37.4/125

**13.2**  
CODE 285537

**WARNING!**  
Before dismantling the head and the base bearing, mark the position to ensure correct re-assembly.
